

HIGH SPEED PROGRAMMING OPTIONS FOR SM800, SM1500, SM3300 and SM6000

- Programming speed about 10 - 20 times faster (compared with standard versions)
- Low output capacitance

SM 800 Series (800 W)	Order Code	Voltage range	Current range
SM 7.5 - 80	Option P250	0 - 7.5 V	0 - 80 A
SM 18 - 50	Option P251	0 - 18 V	0 - 50 A
SM 70 - AR - 24	Option P252	0 - 35 / 70 V	0 - 24 / 12 A
SM 400 - AR - 4	Option P253	0 - 200 / 400 V	0 - 4 / 2 A

SM 1500 Series (1500 W)	Order Code	Voltage range	Current range
SM 15 - 100	Option P210	0 - 15 V	0 - 100 A
SM 35 - 45	Option P211	0 - 35 V	0 - 45 A
SM 52 - 30	Option P212	0 - 52 V	0 - 30 A
SM 52 - AR - 60	Option P213	0 - 36 / 52 V	0 - 60 / 30 A
SM 70 - 22	Option P214	0 - 70 V	0 - 22 A
SM 120 - 13	Option P215	0 - 120 V	0 - 13 A
SM 300 - 5	Option P216	0 - 300 V	0 - 5 A
SM 400 -AR- 8	Option P217	0 - 200 / 400 V	0 - 8 / 4 A

SM 3300 Series (3300 W)	Order Code	Voltage range	Current range
SM 18 - 220	Option P300	0 - 18 V	0 - 220 A
SM 66 -AR- 110	Option P302	0 - 33V /66 V	0 - 110 / 55 A
SM 100 -AR- 75	Option P303	0 - 50 / 100 V	0 - 75 / 37.5 A
SM 330 -AR- 22	Option P304	0 - 165 / 330 V	0 - 22 / 11 A
SM 660 -AR- 11	Option P305	0 - 330 / 660 V	0 - 11 / 5.5 A

SM 6000 Series (6000 W)	Order Code	Voltage range	Current range
SM 15 - 400	Option P166	0 - 15 V	0 - 400 A
SM 30 - 200	Option P167	0 - 30 V	0 - 200 A
SM 45 - 140	Option P168	0 - 45 V	0 - 140 A
SM 60 - 100	Option P169	0 - 60 V	0 - 100 A
SM 70 - 90	Option P170	0 - 70 V	0 - 90 A
SM 120 - 50	Option P171	0 - 120 V	0 - 50 A
SM 300 - 20	Option P 172	0 - 300 V	0 - 20 A
SM 600 - 10	Option P270	0 - 600 V	0 - 10 A

Description

- The SM-Series with the High Speed Programming Options are optimized for maximum programming speed. The speed is about 10 -20 times higher compared to the standard version.
- To achieve the high speed, the output capacitance has been made much smaller. Because of the smaller capacitors, the output ripple voltage is higher, but this is generally no problem for applications requiring high speed.
- The low output capacitance and the fast control results in relatively low current overshoots (if any) in case of sudden voltage variations caused by the load, this is of great advantage for laserdiode applications...

Applications:

- Laser diode power supply, continuous or pulsed
- Test systems requires a fast settings time to improve throughput of factory.
- A constant current source with a low parallel capacitance : plasma, load sensitive to current overshoots, etc.
- A constant current source on a load with a fast voltage variations.

Recommendations:

- Use low inductive cabling, specially for higher currents.
The inductance of the connecting cables (between the power supply and the load) can cause overshoots and slowdown of the rise and fall times. A low inductive cable can be constructed by using multiple isolated strands for the plus and minus wires and by bundling the combination of the mixed plus and minus wires. Each plus wire should be close to a minus wire (see picture below), For lower currents it can be sufficient to tie the plus and minus wires very close to each other.
- Depending on the load impedance, the series inductance of the cables and the parallel capacitance of the power supply can make a resonant circuit, causing ringing and overshoots. Note that the voltage and current control of the power supply has little influence on this effect, because it is outside the control loop. To overcome this problem, connect an RC-filter to the head, to damp the circuit.
- When using analog programming, take care that the programming source is fully floating.
In case of a non-floating source, the power supply should be equipped with a ISO AMP CARD.
When the source is not sufficiently floating, it could result in distorted waveforms.
- Remote sensing is not recommended.

Low Inductance Cable cross section

An ISO AMP CARD should be used in case of a non-floating programming source.

SM800
